DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 13-14 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Sugiyama et al (US Patent 6,017,141).

Sugiyama discloses a method of making a vehicle lamp. As shown in Figs. 8-9, this method involves positioning lamp body 2 of synthetic resin in recess 12a of lower receiving jig 12. Lens 3 of synthetic resin is positioned in recess 13a of upper jig 13. Lens 3 is provided with a leg or projection 3a around its peripheral surface in the manner claimed by the applicant. Welding apparatus 11 generates frictional heat between lens 3 and body 2 by vibrating and pressing the materials together in order to weld the materials in the manner claimed by the applicant.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Sugiyama et al as described above in paragraph 2.

It is the examiner's position that holding mechanisms are well known and conventional in the art in order to hold a work piece still during a welding operation. Such a mechanism inherently provided more precise alignment of the materials being welded which leads to a superior product. For this reason it would have been obvious to one having ordinary skill in the art to employ such a holding mechanism in the method of Sugiyama et al as described above.

Allowable Subject Matter

5. Claims 1-12 and 16-19 are allowed.
